Survey

The survey supports three types of survey instruments to assess and promote online learning.

Educators can use it to collect data that helps them to learn more about the learning group and reflect on their teaching activities.

The questions in the survey module are predefined and cannot be changed. You can create individual surveys using the feedback module.

Select the type of survey from the drop-down list. The following options are available:

- ATTLS (20-item version) - Attitudes to Thinking and Learning Survey
- Critical Incidents - Reflection on critical incidents regarding motivation and participation in the current course
- COLLES (Actual) - Constructivist On-Line Learning Environment Survey (constructivist evaluation of the current course - your actual evaluation of the current course). It is used to record the extent to which the interactive possibilities of the Internet affect learning motivation in dynamic learning methods.
- COLLES (Preferred and Actual) - Constructivist On-Line Learning Environment Survey (constructivist evaluation of the current course - your ideal and actual evaluation of the current course)
- COLLES (Preferred) - Constructivist On-Line Learning Environment Survey (constructivist evaluation of the current course - your ideal evaluation of the current course)

You can find more information on this topic on moodle.org.
