Survey

The survey supports three types of survey instruments to assess and promote online learning.

Instructors can use it to collect data that helps them learn more about the learning group and reflect on their own teaching.

Survey module questions are predefined and cannot be changed. You can create individual surveys using the Feedback module.

Select the type of survey from the drop-down list. The following options are available:

- ATTLS (20 point version) - Attitudes to Thinking and Learning Survey.
- Critical Events - Reflection on critical events regarding motivation and collaboration in the current course.
- COLLES (actual) - Constructivist On-Line Learning Environment Survey (constructivist assessment of the current course - your actual assessment of the current course). It is used to assess the extent to which the interactive capabilities of the Internet affect learning motivation in dynamic learning methods.
- COLLES (preferred and actual) - Constructivist On-Line Learning Environment Survey (Constructivist assessment of the current course - your ideal and your actual assessment of the current course).
- COLLES (preferred) - Constructivist On-Line Learning Environment Survey (Constructivist assessment of the current course - your ideal assessment of the current course).
