Browser and Cookies

We recommend that you always use an up-to-date browser version. This will ensure that pages load quickly and that you always have the latest security settings. The system also offers web conferencing integration (e.g. Zoom). Here we recommend the system check - testing the technical equipment (headset or speaker and microphone) and the software.

Cookies are needed to temporarily store information in your browser. If cookies are disabled in your browser, they must be enabled in order for your login to work correctly when accessing Moodle.

- Instruction for Microsoft Edge
- Instruction for Chrome
- Instruction for Safari

Note on using Internet Explorer: As of version 3.10.x, moodle no longer supports Internet Explorer. Compatibility can no longer be guaranteed in the future. Microsoft recommends using the new browser Microsoft Edge, which also offers an Internet Explorer mode. You can find more information about this on Microsoft's Help pages.
