

Participify

With Participify (formerly ARSnova), you can have live (or asynchronous) voting at your events, generate word clouds and collect feedback.

This gives you immediate feedback on the participants' level of knowledge. These polls are suitable for starting discussions, clarifying questions and activating participants, for example.

The provider recommends that lecturers use the application on a laptop, desktop PC or tablet. Although operation via a smartphone is also possible, it can be difficult to create new content due to the smaller display area.

Participify is currently available for us to test **for a limited period until 31.03.2024**. We look forward to your feedback and experience.

Login via the Academic Cloud

The Academic Cloud is co-financed by the MWK, the Lower Saxony Ministry of Science and Culture. Planning and operation are supported by LANIT/HRZ, the forum of university data centers in Lower Saxony.

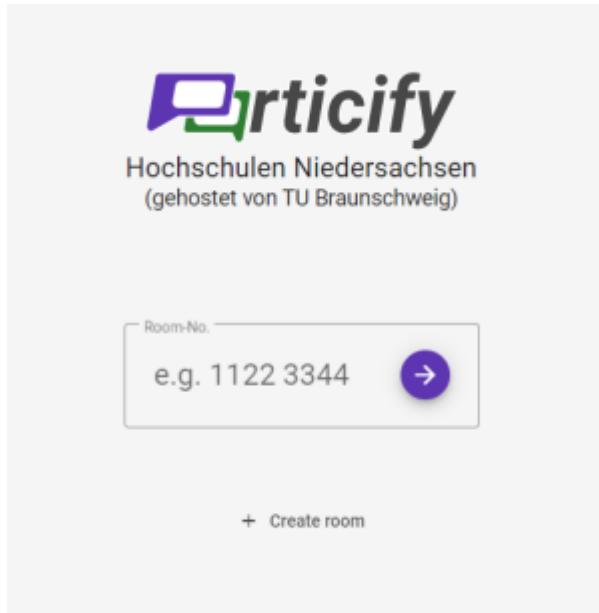

To create a survey with Participify, members of Jade HS log in via the **Academic Cloud**.

1. Go to the website: www.academiccloud.de
2. Click on „**Login / Federated Login**“
3. Select „**Jade Hochschule**“ under Institution.
4. Select „**Continue Login**“ and enter your University Access Data (SSO).

Simple participation in surveys is possible without login, see below, „[Enable access for participants](#)“.

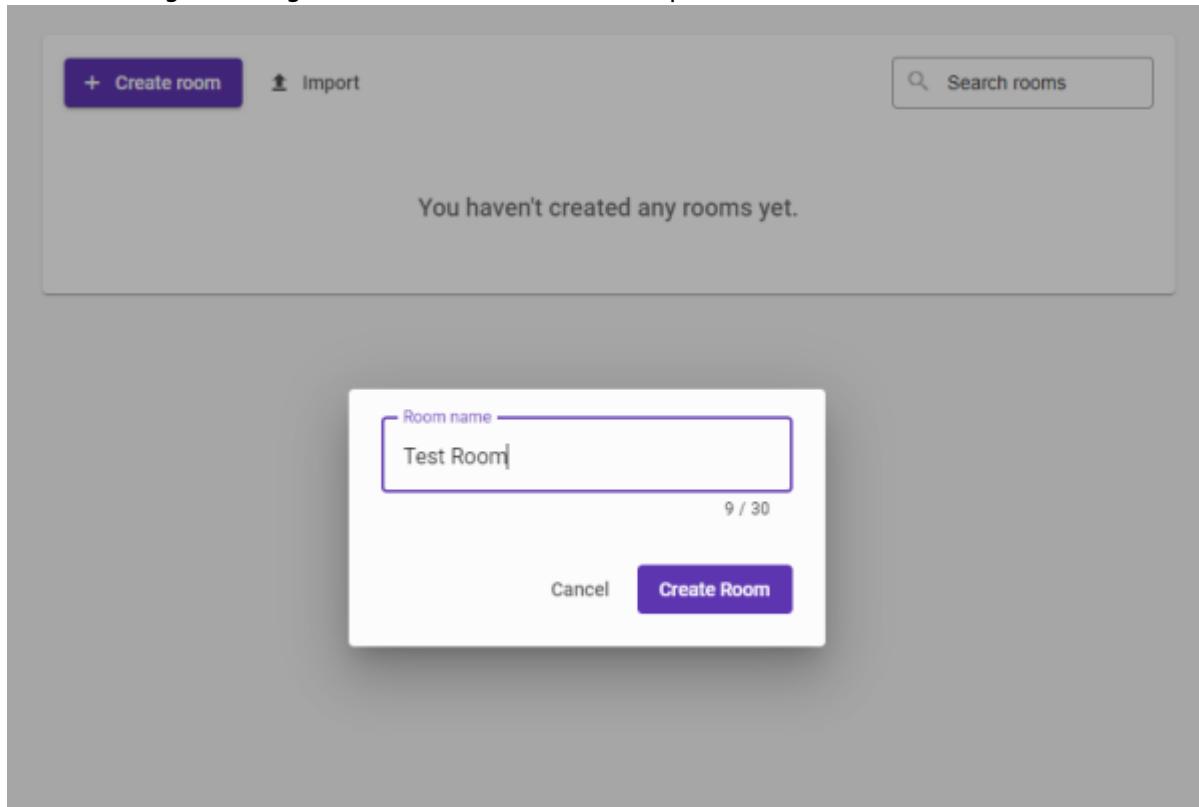

Rooms

First, you create a „room“ that students will call up later and which contains the questions. On the start page (and in the room administration) you will find the button to create a room:

Picture: Create room

After clicking, a dialog for the name of the room opens:

Picture: Enter name for room

Enter a name and select „**Create Room**“. You will be forwarded directly to the newly created room. All other settings are optional and can be made later in the room settings.

The most important areas can be accessed immediately via the start page of the room. These include:

- Questions and answers (Q&A)
- Question series
- Live Feedback

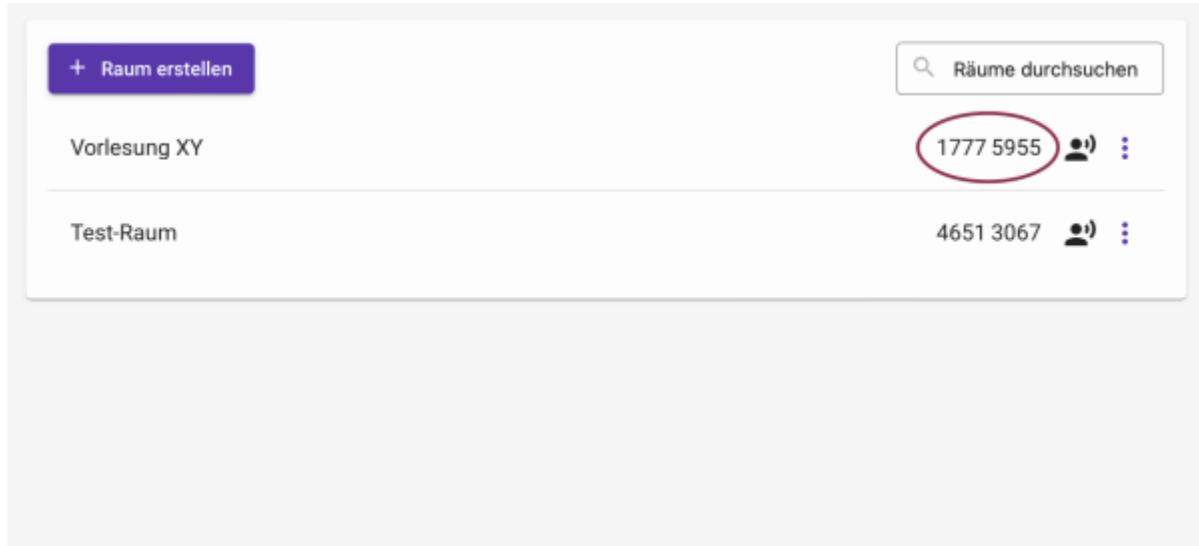

In the header bar of the application, you will find buttons that take you to the room settings or the

presentation mode. You also have the option of changing roles here.

Please refer to the „[User manual for lecturers](#)“ (in German) for further details.

Enable access for participants

In your room overview, you will see an eight-digit numerical code for each room. You can pass this on to your participants or copy the entire link by clicking on it. Users can then use the number code to gain access and participate.

The screenshot shows a list of rooms. At the top, there is a purple button labeled '+ Raum erstellen' and a search bar with the placeholder 'Räume durchsuchen'. Below the search bar, there is a list of rooms with their respective codes and user icons. The room 'Vorlesung XY' has the code '1777 5955' circled in red. The room 'Test-Raum' has the code '4651 3067'.

User manual

The functional options are very extensive, so please refer to the user manual for more detailed questions.
