TaskCards

TaskCards is an online platform that allows teachers and students to work collaboratively.

They can create pinboards and publish the so-called TaskCards on those pinboards. A TaskCard can consist of texts, images, links and various file attachments. The pinboards are private or can be made publicly accessible via a link.

The TaskCards platform is developed and operated by the German company dSign Systems GmbH. The servers for taskcards.de are located exclusively in Germany. TaskCards is compliant with the DSGVO.

Get Access

Jade University of Applied Sciences has purchased a limited number of licences for teaching purposes. Request your licence by sending an email to digitale-lehre@jade-hs.de.
